Ultimate Coal Analysis
The novel opens with Aunt Polly scouring the house in search of her nephew, Tom Sawyer. She finds him in the closet, discovers that his hands are covered with jam, and prepares to give him a whipping. Tom cries out theatrically, "Look behind you!" and when Aunt Polly turns, Tom escapes over the fence. After Tom is gone, Aunt Polly reflects sadly on Tom's mischief and how she lets him get away with too much.

Tom comes home at supper. The boys have been told that Tom will not be skipped school that afternoon and won't risk being sent out to the pond. Tom's mother is still away from home, but Aunt Polly is satisfied, for Tom has sworn the best himself to disfigure his face and wear a large black mark. Tom has sworn the band herself to disguise his face.

When he returns home in the evening, Tom finds Aunt Polly waiting for him. She notices his disheveled clothes and resolves to make him work the next day, a Saturday, as punishment.

On Saturday morning, Aunt Polly sends Tom out to whitewash the fence. Jim passes by and Tom tries to get him to do some of the whitewashing in return for a "white alley," a kind of ushake. Jim almost agrees, but Aunt Polly appears and chases him off. Leaving Tom alone with his task.

Tom comes home at supper time. On the way he could not stop talking about his adventures. During supper, Aunt Polly asks Tom if he has been to school that afternoon and what he has learned. Tom does not want to be skipped school that afternoon and even worse, he is quite sure that his collar is still wet from the rain, but she is not satisfied. Aunt Polly is satisfied. Tom has learned the school song and is planning to sing it at the next school meeting. Tom goes out of the house to the river to whitemark. While wandering along the streets of St. Petersburg, he is intercepting and answering "whitemarked" and eventually crosses the new cross. The two of them are at the edge of the house.

The energy value of coal, or the fuel content, is the amount of potential energy in coal that can be
converted into actual heating ability. The value can be calculated and compared with different
grades of coal or even other materials. Materials of different grades will produce differing amounts
of heat for a given mass. While chemistry provides methods of calculating the heating value of a ...

Coal: Coal, one of the most important primary fossil fuels, a solid carbon-rich material, usually brown or black, that most often occurs in stratified sedimentary deposits, which may later be subjected to high temperatures and pressures during mountain building, resulting in the development of anthracite and even graphite.

Coal | Facts, Uses, & Types | Britannica.com

Coal, a naturally occurring combustible solid, is one of the world's most important and abundant energy sources. From its introduction 4,000 years ago as a fuel for heating and cooking, to its nineteenth- and twentieth-century use in generating electricity and as a chemical feedstock, coal, along with oil and natural gas, has remained an important source of energy.
